- *TypeScript*
- *React.JS*
- *Bootstrap*
- *React-Router*
- *React-Redux*
- *React-Bootstrap*
- *Git & GitHub*
- *JEST*

About ME

With over 5+ years of experience as a Data Analyst in the contact center industry, I am excited to bring my problem-solving, numerical, and coding skills to your esteemed team and work environment as a **front-end developer**. I have spent the past few months preparing myself by acquiring all the required skills, technologies, and tools needed for web development. Additionally, I have gained hands-on experience in building real projects to perform tasks that are typically required for a front-end role.

As a front-end developer, I am ready to take on the responsibility of converting a sketched design into lines of code, developing user-friendly web pages and applications, devising solutions for users, managing incoming and outgoing requests from/to the backend, and transforming data when necessary. I will also provide clear feedback and direction to users and stay up-to-date with the latest technologies.

TEMPLETS   *HTML | CSS | JS | BOOTSTRAP*

I have built some great templates and responsive designs using only HTML, CSS & some JS to manage some UI features, and also bootstrap.

https://expenses-dashboard.onrender.com

Expenses_Dashboard   *REACT | ROUTER | REDUX | BOOTSTRAP | SASS*

The purpose of this project is to assist the user in measuring and analyzing their monthly expenses for better control. It was a significant challenge for me as I had to handle data transformation, adding, deleting, and updating without relying on server-side code. storing it in Firebase BD and getting the latest updates to display.

https://food-order-app-1d0r.onrender.com   *REACT | SASS*

Food_Order_App

The purpose of this project is to assist the user to browse all available menus of different kinds of food and then to assets him in ordering and submitting his address, managing the cart with the help of context.

https://events-manager-egc6.onrender.com

Events_Manager   *REACT | ROUTER*

This App allows the user to browse Events, Once authenticated, the user can add, delete or edit, it's connected to a Node.JS backend API, and it was a great opportunity to practice router and authentication, as well as deal with REST API.

https://shopping-cart-r0hf.onrender.com

Shopping_Cart   *REACT|ROUTER|TS|BOOTSTRAP|SASS*

it's an E-commercial website with a shopping cart, it was a great opportunity to practice a complication of a lot of technologies together.

https://note-app-ia0b.onrender.com

Note_App   *REACT|ROUTER|TS|BOOTSTRAP|SASS*

awesome notes app with the help of the local storage and also nice themes options made by SASS, it was a great opportunity to practice a complication of a lot of technologies together.
