- HTML
- CSS
- JavaScript
- SASS
- TypeScript
- React.JS
- Bootstrap
- React-Router
- React-Redux
- React-Bootstrap
- Git & GitHub
- JEST

ABOUT ME

As a front-end developer, I am ready to take on the responsibility of converting a sketched design into lines of code, developing user-friendly web pages and applications, devising solutions for users, managing incoming and outgoing requests from/to the backend, and transforming data when necessary. I will also provide clear feedback and direction to users and stay up-to-date with the latest technologies.

With over 5+ years of experience as a Data Analyst in the contact center industry, For a long time, I've been interested in combining my coding and problem-solving skills, which I gained from the data analysis field, with my passion for designing UI and developing websites and web applications. I have spent the past two years preparing myself for this career shift and have acquired all the necessary skills, technologies, and tools needed for web development. Moreover, I have gained practical experience in building real projects that typically require front-end skills.

WORK EXPERIENCE

WEB TEMPLETS   *HTML | CSS | JS | BOOTSTRAP*

https://ahmed-manakhly.github.io/Self_Teach
https://ahmed-manakhly.github.io/MekhoSocial
https://ahmed-manakhly.github.io/Organization_Portfolio

I have built some great templates and responsive designs using only HTML, CSS & some JS to manage some UI features, and also bootstrap.

Expenses Dashboard   *REACT | ROUTER | REDUX | BOOTSTRAP | SASS*

https://expenses-dashboard.onrender.com

The purpose of this project is to assist the user in measuring and analyzing their monthly expenses for better control. It was a significant challenge for me as I had to handle data transformation, adding, deleting, and updating without relying on server-side code. storing it in Firebase BD and getting the latest updates to display.

Food Order App   *REACT | SASS*

https://food-order-app-1d0r.onrender.com

The purpose of this project is to assist the user to browse all available menus of different kinds of food and then to assets him in ordering and submitting his address, managing the cart with the help of context.

Events Manager   *REACT | ROUTER*

https://events-manager-egc6.onrender.com

This App allows the user to browse Events, Once authenticated, the user can add, delete or edit, it's connected to a Node.JS backend API, and it was a great opportunity to practice router and authentication, as well as deal with REST API.

Shopping Cart   *REACT|ROUTER|TS|BOOTSTRAP|SASS*

https://shopping-cart-r0hf.onrender.com

it's an E-commercial website with a shopping cart, it was a great opportunity to practice a complication of a lot of technologies together.

Note App   *REACT|ROUTER|TS|BOOTSTRAP|SASS*

https://note-app-ia0b.onrender.com

awesome notes app with the help of the local storage and also nice themes options made by SASS, it was a great opportunity to practice a complication of a lot of technologies together.
